CEBD 1250 Weekly Journal

This assignment is to be completed weekly by students in CEBD 1250. It's objective is to encourage the reflection and thoughtful application of techniques learned throughout the course to their work and real world applications.

The deadline for this assignment is 1 minute prior to class start the following week (i.e. 8:59 am on Sunday mornings).

* Required

Full name *

Michael Minkiewicz

What did I learn this week *

Week 2 (April 14, 2019 class): Learned about Database modelling. In database modelling, there exists relationships between different tables called "Primary Key" & "Foreign Keys". These keys are common between 2 tables (the link). Another important element in database modelling is "normalization" and that in the real world setting can reach 3 normal form (3NF). Another cool element, we learned was SQL and its basic language (DML, DDL, TCL, DCL). I even learned basic commands for SQL , it was fun to practice the commands with the examples from your Sandbox.

How can I apply what I learned in the real world/my company? *

When I make requests for data extracts, I will understand that they probably come from different tables, and that these tables where probably built from SQL querys. Cool stuff, if I can access the info directly and select the elements I am looking for directly from the source, this will make my role a lot simpler by wasting less time on less useful reports.

What would I like to learn next? *

I would like to learn more about SQL language and extracting information from the different data tables, since I believe this would help my day to day role.

What do I need from the instructor to accomplish my goals? *

Make sure to give background information (introduction) to the material you present like that if I never heard of the material atleast I will understand what it is before we starting diving into the different concepts of the material being presented.
